

Model 50D and 50D-TV

A high output dynamic interior and advanced circuit design give the Turner 50D ultra wide range, making it a truly high-fidelity microphone without need for closely associated auxiliary equipment. High quality performance results in realistic reproduction of voice and music. Response: 50-15,000 c.p.s. Level: -55 db. at high impedance. The Model 50 microphone utilizes a hinged coupler with $\frac{5}{8}$ "-37 thread mounting . . . quick-disconnect feature permits quick interchange from stand to hand use. Model

50D and Model C-6 matching desk stand with built-in shock mount are finished in satin chrome.

Illustrated, with Model BL-6 matching desk stand, is the Model 50D-TV . . . with satin black finish that minimizes light reflection. Both models complete with 20-ft. cable set. High impedance balanced line models are furnished with quick-disconnect Cannon XL-8 connector. Low impedance balanced-line models have built-in Cannon XL-4 con-

nectors which permits selection of either 50 or 200 ohms impedance when connection is made with the proper pair of conductors at terminal end of cable.

Model 50D—Satin chrome finish.
