

## UNIVERSAL MODEL "BB"

The most popular double-button public address microphone in America

The masterpiece in two-button microphone construction. Model "BB" is nearly twice as heavy as any other microphone in its class. Built to hair-line precision. An idea of the ruggedness can be obtained by the fact that Model "BB" is 3 ins. in diameter by 2 in. thick.

It is built especially for voice-pickup, public address work and for amateur broadcasters, experimenters, halls, ball rooms, speaker wagons, etc. Finished in beautifully finished, highly polished chrome plate.

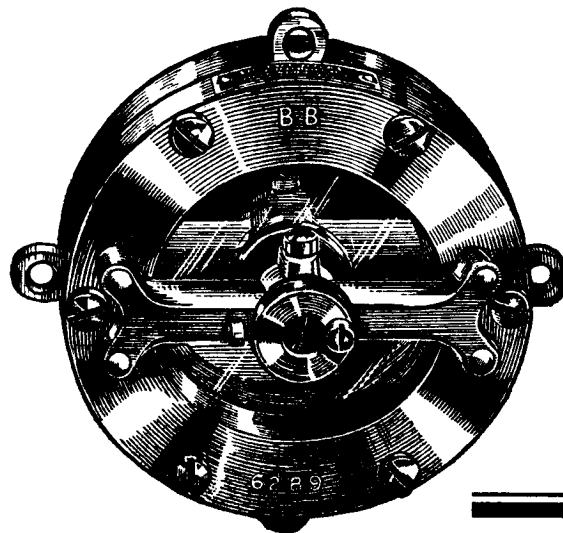

Model "BB" has extra heavy 24-Kt. Pure Gold Spot Centers, Duralumin diaphragm and has a frequency

range of from 70 to well over 4,000 cycles, 200 ohms per button.

Owing to the large size and weight of Model "BB", it is recommended that Model "L" desk stand be used for mounting instead of Model "K", especially when covers are used.

Made in three degrees of sensitivity: S, very sensitive; M, medium sensitive (Standard); and D, highly damped.

Compare this new Heavy Model "BB", listing at only \$25.00, with any \$45.00 to \$50.00 microphone on the market.
