

Frequency response curve of Model "LL" is similar to the characteristics shown above for Model "KK," except that the range has been extended on both the low and high frequency ends, making this the superlative microphone for musical broadcasts.

UNIVERSAL MODEL "LL"

An extra rugged heavy type two-button broadcast microphone. The entire assembly is of high carbon steel, ground to within .001 of an inch accuracy. The diaphragm is alloy of exactly the proper hardness and stretch to secure the best results. Pure gold contacts are placed on each side. The materials used and the precision of manufacture combine to make this model stand out as the superlative microphone, reproducing a range of from 30 to 7000 cycles.

Model "LL" is $3\frac{1}{2}$ inches in diameter by $1\frac{1}{4}$ inches thick and is standard 200 ohms per button. It is made in three degrees of sensitivity: S, very sensitive; M, medium sensitive (Standard); and D, highly damped. Due to the precision of workmanship in this model, a rust-proof process is used to preserve the original steel surface.

Net weight, $2\frac{1}{4}$ lbs. Packed weight, $3\frac{1}{2}$ lbs.
