# No. 600A TRANSMITTER (MICROPHONE)

MANUFACTURE  
DISCONTINUED

A double button high quality granular carbon transmitter with a stretched diaphragm.

Intended for use in public address and speech input systems.

Arranged to mount suspended in a No. 2A or No. 1101B transmitter mounting.

Normal operating current is .020 to .045 ampere per button and the two buttons should carry currents not differing by more than .010 ampere.

Same as No. 387 transmitter, except for means provided for stretching and clamping the diaphragm.

Replaces Nos. 387 and 387W.
